

CG-700XL

MSRP STARTING AT:

SAIMA

NORTH AMERICA

The CG-700XL is a compact elliptical chamber security portal system with a baseless frame and full 14-millimeter glass design. SAIMA's UltraSun™ microwave and volumetric technology provides protection against any piggybacking or tailgating into a secure area. Options include Biometric Identification Systems, CCTV Microcameras, etc. Using programmable logic, the CG-700XL is compatible with virtually any of today's access control security systems and arrives ready to be integrated with the specific identification systems the end-user wants to have installed. The XL package offers extended visual contact with the transiting party and provides an aesthetically pleasing, less intrusive installation. Furthermore the 700XL's compact and baseless design allows for more placement versatility and absolutely no ground-work, making retrofit installations a snap.
