

TP-500

MSRP STARTING AT:

SAIMA

NORTH AMERICA

TP-Series turnstiles are waist high, free rotating or electrically controlled mechanical turnstiles. Each model is equipped with a standard tripod arm barrier system made of thick gauge stainless steel tubing and an electromagnetic locking gear base. The TP series' simple design and thick steel construction has proven unmatched durability and outstanding resilience to wear and tear in unfriendly environments and high-flow installations. The TP-500 is a standard length, waist-high, mechanical turnstile. Ideal for high-traffic areas, the TP-500 is available in badge, barcode, and coin operation and comes standard with a digital rotation counter and illuminated traffic indicators on either side as well as along the top surface.
